ASP.NET

Responsibilities:

Full-Stack Development:

Design, develop, and maintain web applications using ASP.NET Core on the backend, Angular on the fr

Ensure the responsiveness and performance of applications across devices and platforms.

Database Management:

Design and implement efficient database schemas using SQL Server.

Optimize database queries and ensure data integrity.

Architecture and Design:

Collaborate with cross-functional teams to define system architecture and design scalable solutions.

Provide technical leadership in the design and implementation of complex systems.

Code Review and Quality Assurance:

Conduct code reviews to ensure best practices and coding standards are followed.

Implement and enforce quality assurance processes to deliver high-quality software.

Team Collaboration:

Work closely with other developers, UI/UX designers, and product managers to deliver features that me

Mentor junior developers and provide technical guidance to the development team.

Troubleshooting and Debugging:

Identify and resolve technical issues in a timely manner.

Collaborate with support teams to address and fix reported bugs.

Adopting New Technologies:

Stay updated on the latest technologies and trends in web development and database management.

Evaluate and introduce new tools and technologies to improve development efficiency.

Documentation:

Document code, processes, and system architecture to facilitate knowledge transfer and onboarding of r

Qualifications:

Proven experience as a Full Stack Developer with expertise in ASP.NET Core, Angular, and SQL.

Strong understanding of software development principles, design patterns, and database management.

Experience in database design and development using SQL Server or other relational databases.

Excellent problem-solving and communication skills.
